SUNLIGHT / EVIDENCE REVIEW

Worked example · clinic supply programme

Delivery assurance brief · 2140387598b04757bfd9ae51e68ba02a

> SYNTHETIC WORKED EXAMPLE · Calculations reconcile submitted evidence, not authenticated bank or field feeds. Distinct declared issuers do not establish independence. Goods, money and service outcomes are separate measurements. No automatic payment stop, recovery or redirection is connected.

Obligation

SYNTHETIC-DELIVERY-ASSURANCE-001

Public promise

Deliver and accept 1,000 medical kits, then establish usable supplies at 25 clinics.

Community / intended recipients

25 fictional clinics

Recipient organization

Example receiving authority

Programme owner label

Example programme team

Country / origin

GH / NL

Deadline

2026-10-14T19:26:52.029898Z

Budget context (not a debit)

1000000 USD

Evidence / review version

Obligation baseline [https://example.org/synthetic/contract] · Open delivery workspace [/watch/?obligation=2140387598b04757bfd9ae51e68ba02a#delivery]

Origin-to-arrival reconciliation

Each row is one declared transfer identity and its attributable ledger entries. Credits may be partial. Pre-credit deductions remain submitted claims. Matching claimed amounts does not authenticate either issuer.

Transfer / parties	Currency	Sent	Recorded arrival	Submitted pre-credit deductions	Raw difference	Residual / state
EXAMPLE-TRANSFER-001 · example-treasury → example-receiving-authority	USD	1000000	965000	5000	35000	30000 / unexplained difference

Physical delivery and service outcomes

Stage	Target / unit	Observed	Coverage through	Shortfall	State
dispatched	1000 medical_kit	1000	2026-10-19T19:26:52.029898Z	0	reported_target_met
received	1000 medical_kit	820	2026-10-19T19:26:52.029898Z	180	shortfall
accepted	1000 medical_kit	730	2026-10-19T19:26:52.029898Z	270	shortfall
outcome	25 clinic	18	2026-10-19T19:26:52.029898Z	7	shortfall

Latest cumulative reports are not added together. Different issuer reports, units and coverage times can block comparison. Payment, receipt, acceptance and service outcomes are separate facts; none establishes causation.

Where to look next

Unexplained difference

Sender debit minus recorded credits minus submitted pre-credit deductions. Inspect each supporting record; this is a claim-based reconciliation, not a theft finding.

Next evidence: Inspect the debit, recipient credit, shared transfer identity, settlement cut-off and any pre-credit deduction evidence.

Received: shortfall

Target compared with cumulative reported coverage at or after its deadline. Receipt, acceptance and service observations remain distinct; no independent field verification is implied.

Next evidence: Obtain a cumulative received record for this exact obligation, with unit, coverage date, issuer and inspection basis.

Accepted: shortfall

Target compared with cumulative reported coverage at or after its deadline. Receipt, acceptance and service observations remain distinct; no independent field verification is implied.

Next evidence: Obtain a cumulative accepted record for this exact obligation, with unit, coverage date, issuer and inspection basis.

Outcome: shortfall

Target compared with cumulative reported coverage at or after its deadline. Receipt, acceptance and service observations remain distinct; no independent field verification is implied.

Next evidence: Obtain a cumulative outcome record for this exact obligation, with unit, coverage date, issuer and inspection basis.

Calibrated delivery engine

us_federal

Evidence basis current: True · 2026-10-19T19:28:36.994901+00:00

Existing calibrated delivery engine, using only the comparable accepted quantity. Float-based engine thresholds are separate from the exact Decimal ledger. No independently verified inspection, financial finding or unsupported dimensions are inferred.

DEL-OUT-001 Delivery ratio 0.73 < 0.80 threshold; planned 1000, delivered 730

Integrity

Local history and retained content check: True

Local hash chain only; not an issuer signature, independent timestamp or external authentication.

Advanced audit packet [/assurance/obligations/2140387598b04757bfd9ae51e68ba02a/export]

Interpretation

This brief describes retained source claims and calculations. A discrepancy is a review lead, not a finding of theft. Hashes check local content integrity; they do not authenticate publishers. Scope and source periods remain part of every conclusion.
